Quiz5
(30 min)

Write a short program:
- Define a structure called `Employee`, each employee should have their `name`, which is a char*, and `id` which is an integer number.
- Define a structure called EmployeeListNode for an employee list. Each node has its `data`, which is an `Employee` pointer, and another `next` pointer pointing to the next node in the list.
- Implement a clone function that deep copies an employee list, and returns the head of the cloned list, using the following signature.
  ```
  struct EmployeeListNode* clone(struct EmployeeListNode*);
  ```
